

Name: Jingshi Liu

Section: Image Processing

Project: **Project 8 - Thinning**

Due Date: Nov 28th

Algorithm Steps

Step 0: inFile, outFile1, debugFile \leftarrow open via args []
numRows, numCols, minVal, maxVal \leftarrow read from inFile
outFile1 \leftarrow write numRows, numCols, minVal, maxVal
dynamically allocate all arrays and initialize via constructor.
changeCount \leftarrow 0
cycleCount \leftarrow 0

Step 1: loadImage (inFile, **aryOne**)

Step 2: outFile1 \leftarrow "In main(), before thinning, changeCount = ; cycleCount =" // print values.
reformatPrettyPrint (**aryOne**, outFile1) // using dots.

Step 3: thinning (aryOne, aryTwo, debugFile)

Step 4: cycleCount ++

Step 5: outFile1 \leftarrow "In main (), inside iteration; changeCount = ; cycleCount =" // print values.
reformatPrettyPrint (**aryOne**, outFile1) // using dots.

Step 6: repeat step 3 to step 5 until changeCount \leq 0

Step 7: outFile1 \leftarrow "in main (), the final skeleton, changeCount = ; cycleCount =" // print values.
imgReformat (aryOne, outFile1) // No dots.

Step 8: close all files
